

Genesis Crypto Technology

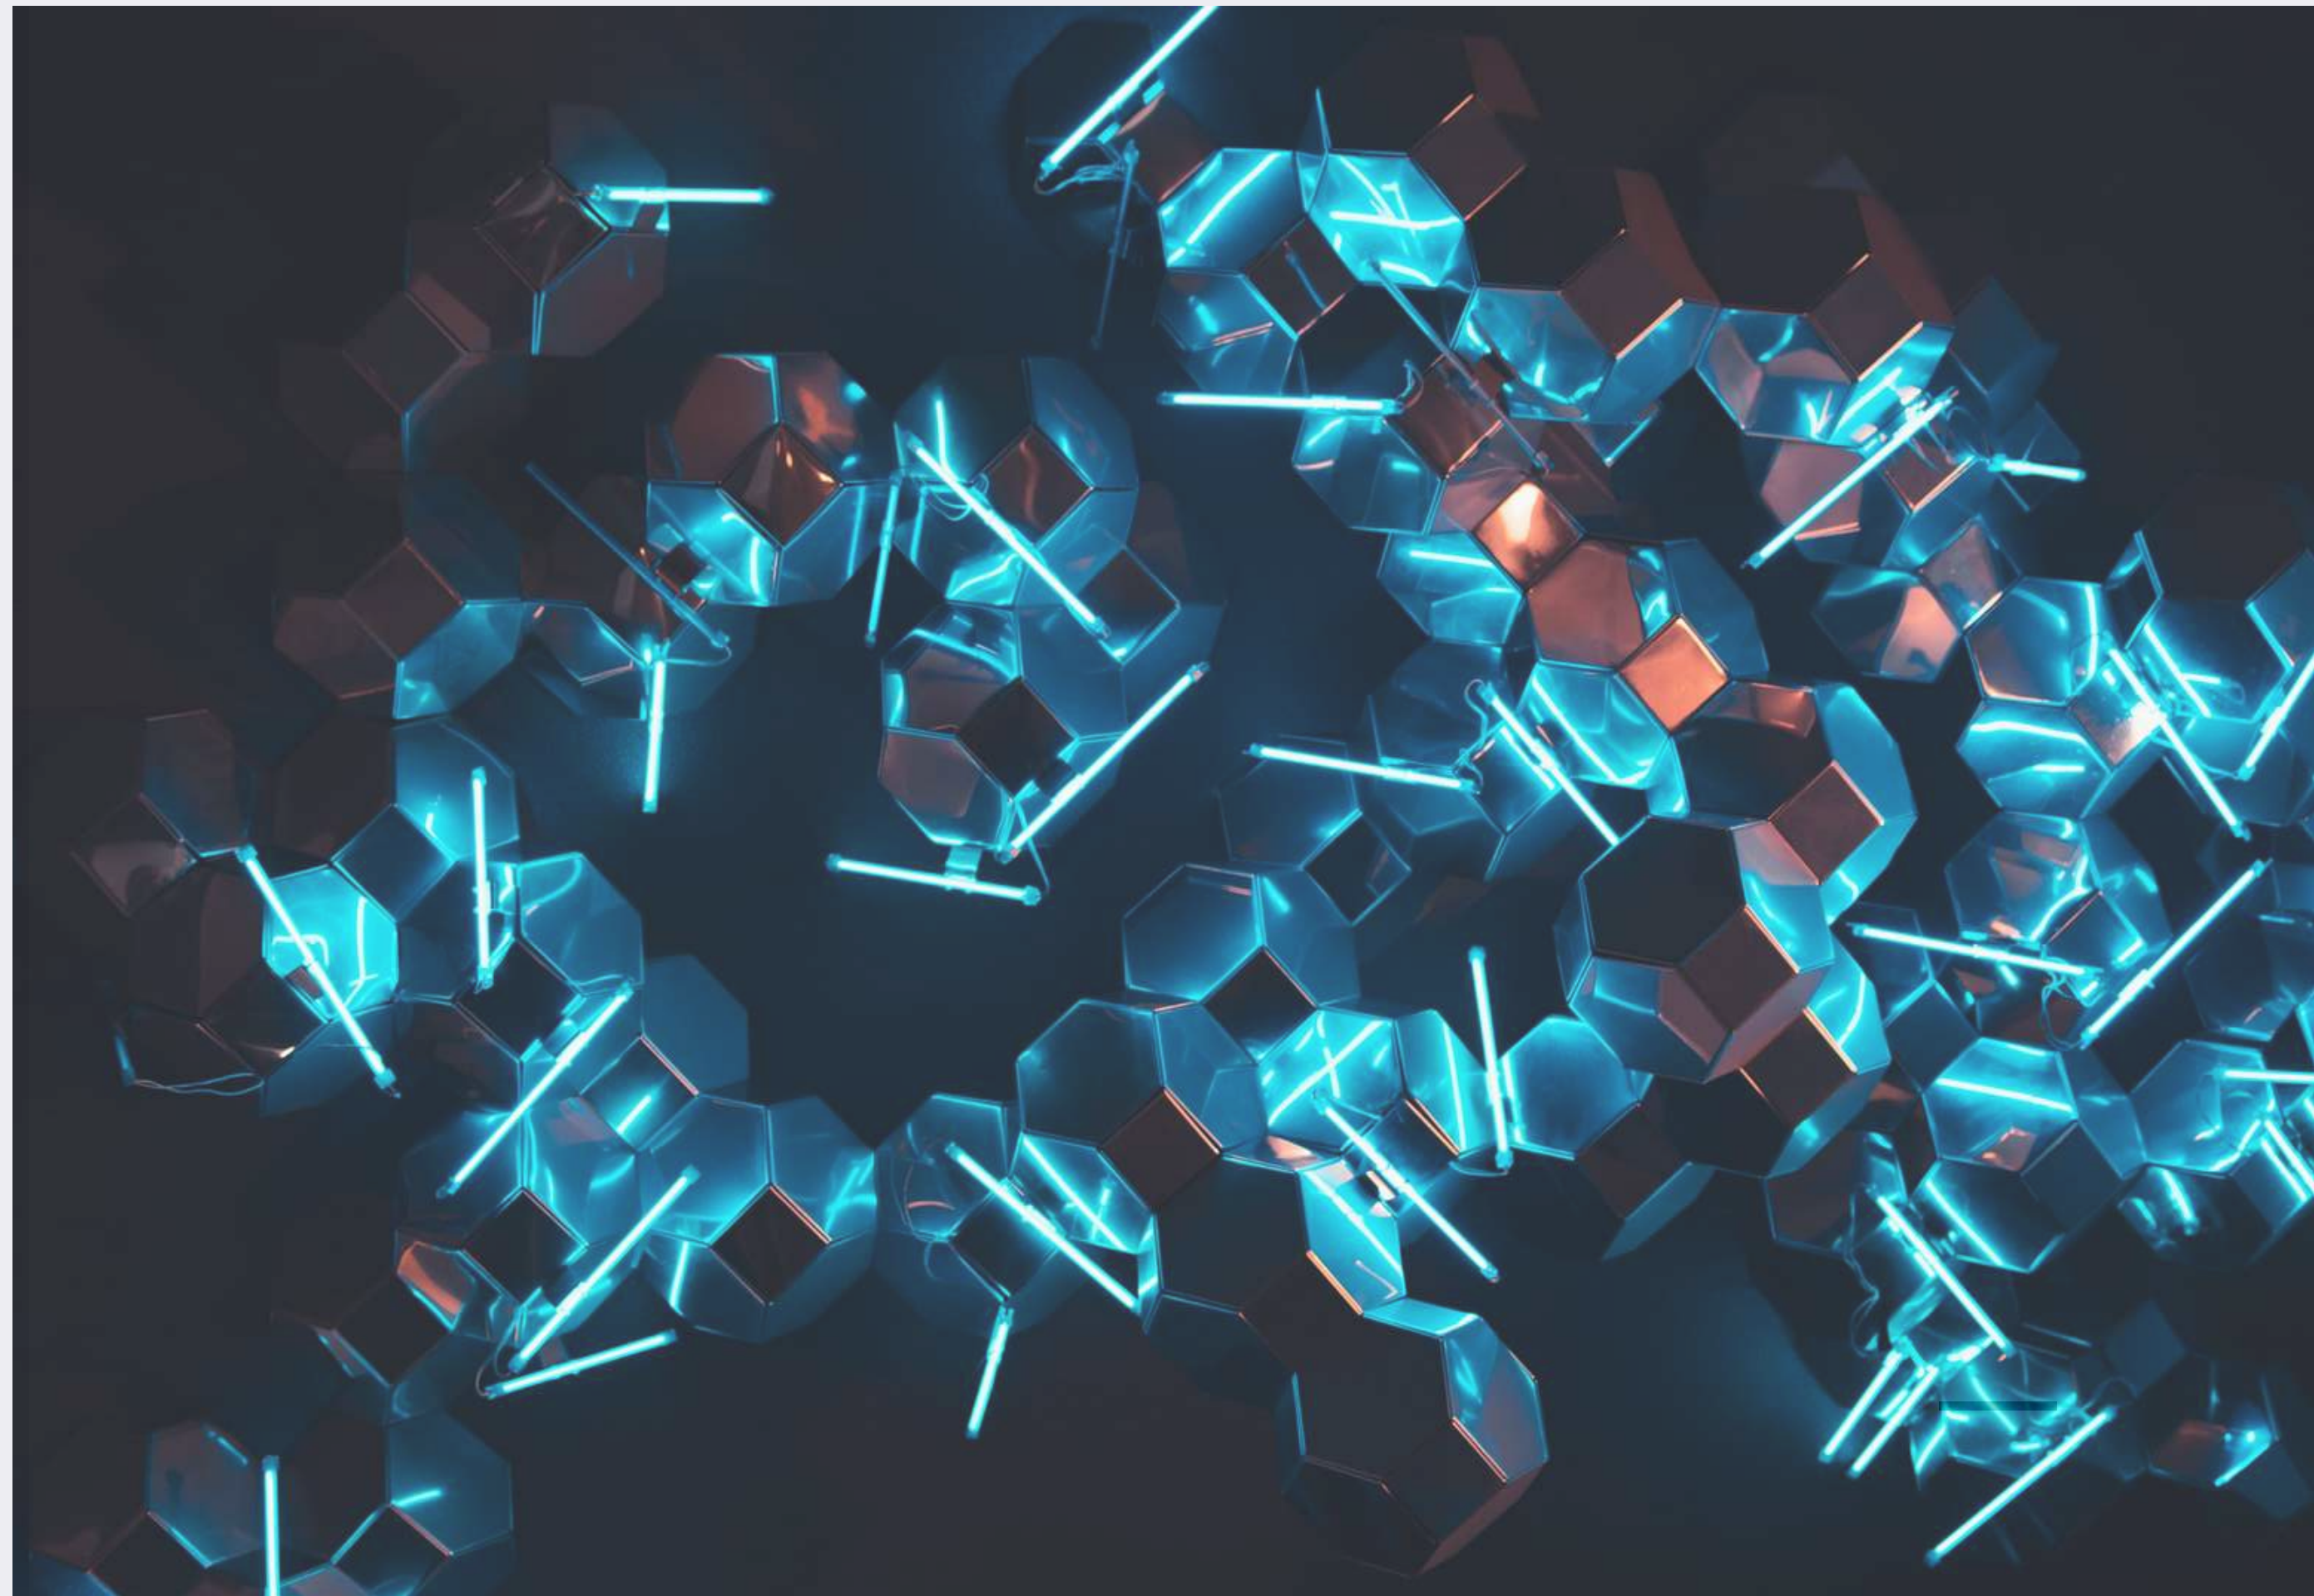

Your journey begins here, with us.
Get ready for the adventure.

Solution

Meschain MES (Manufacturing Execution system) provides a traceable, transparent production process by detecting problems that cause quality and efficiency in production with software information systems.

Problem ?

The presence of factors that harm the production process by negatively affecting productivity and quality in production

Welcome to Technology Inc.

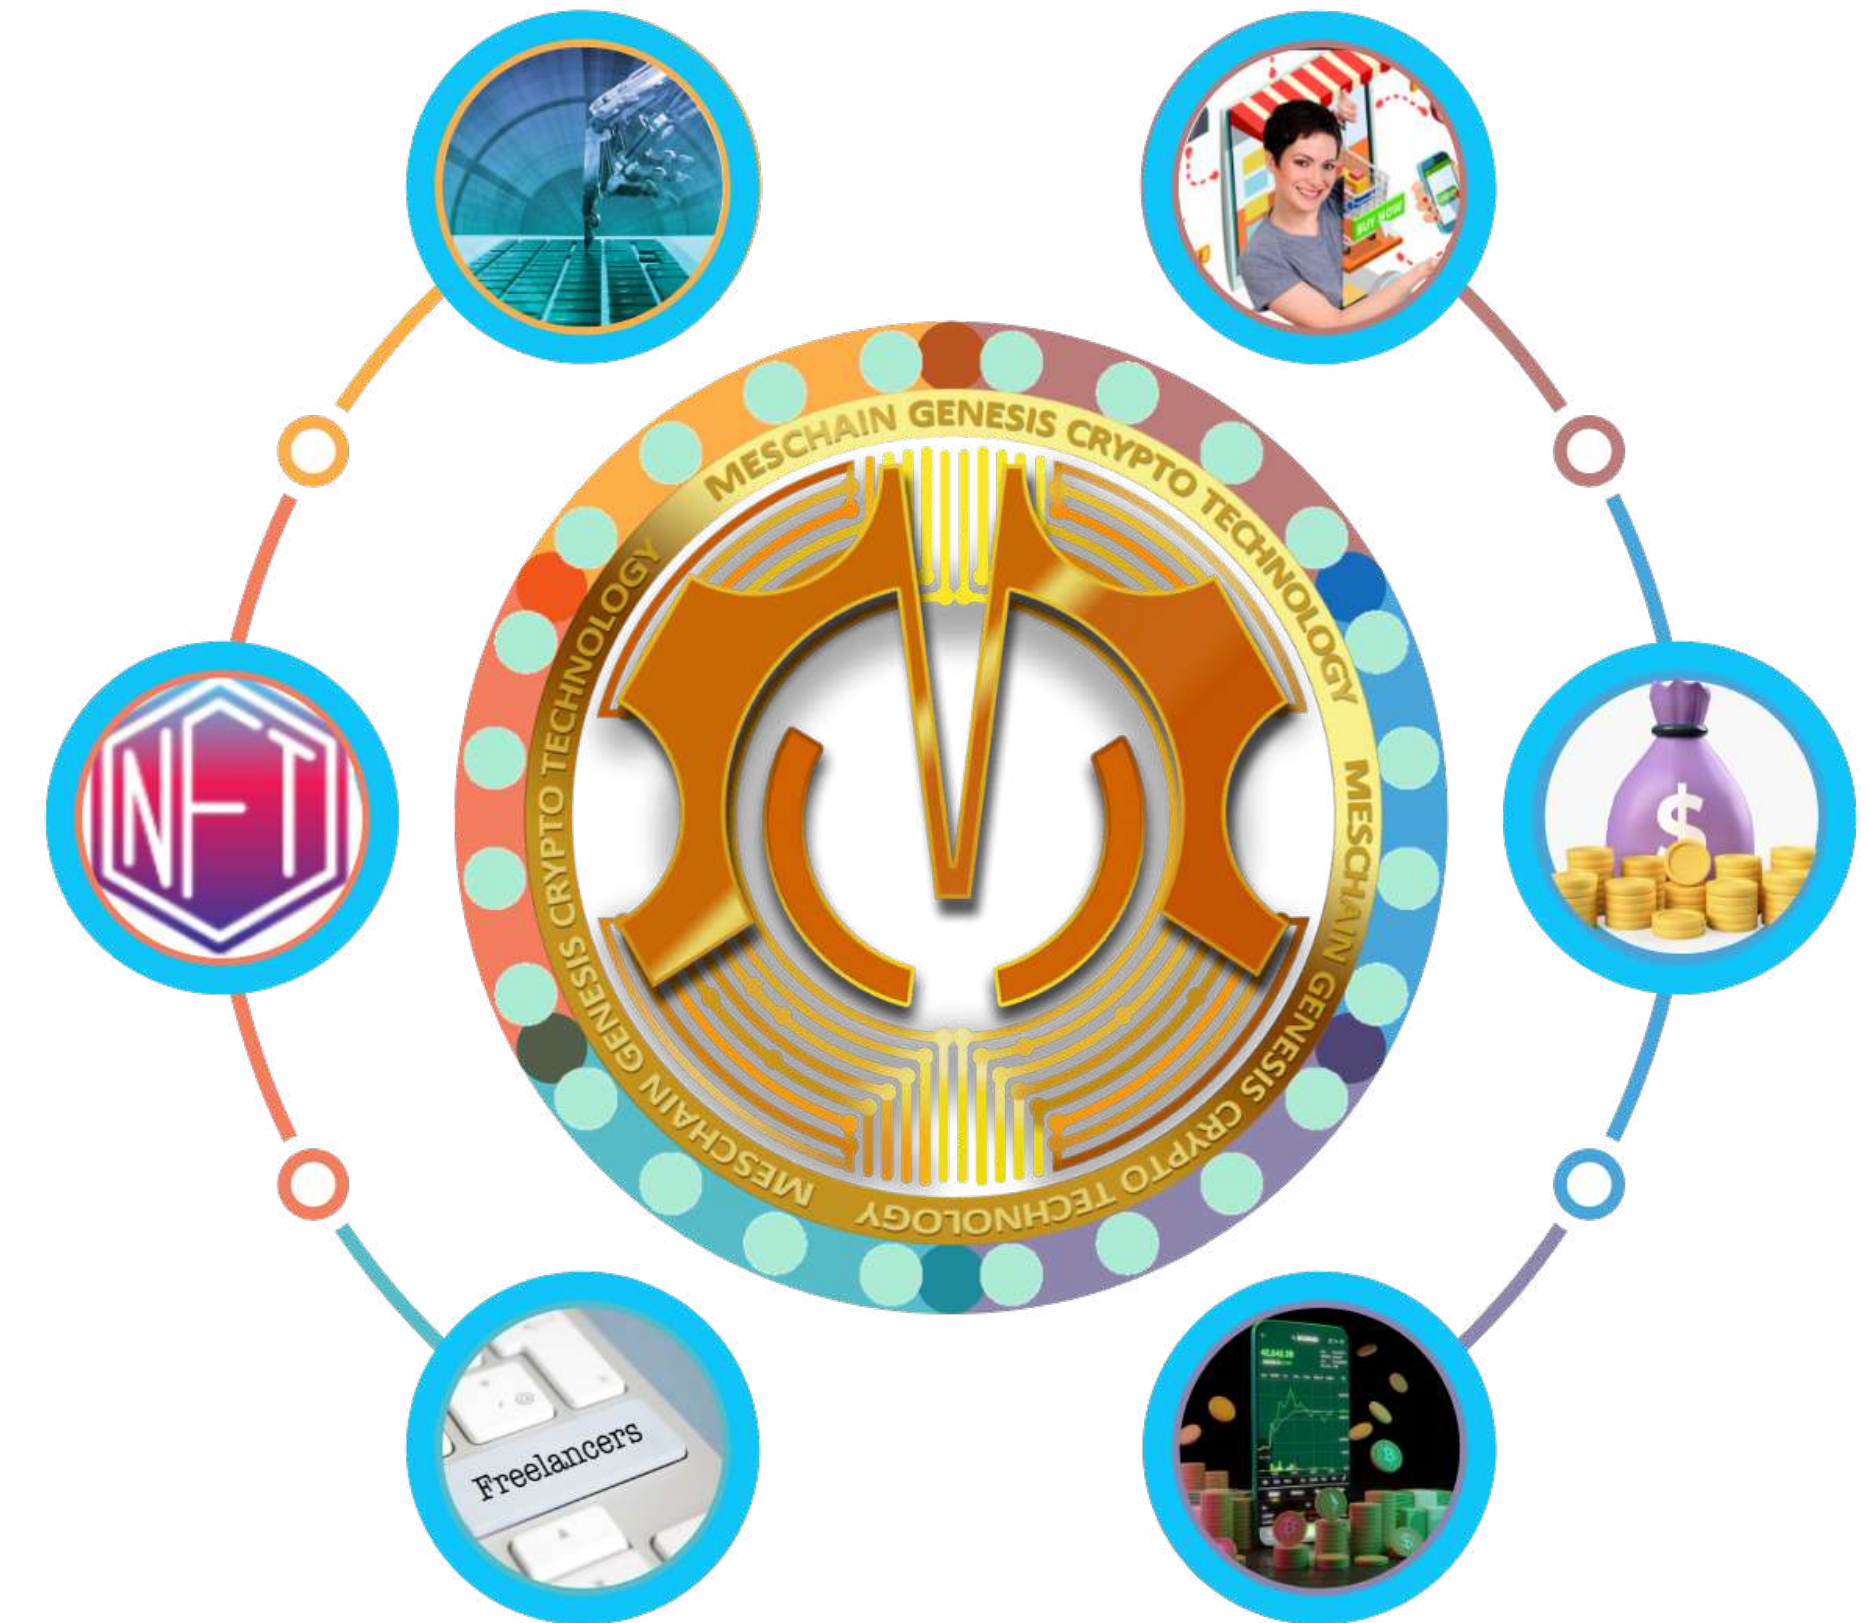

Genesis Crypto Technology company is a company established to provide MES (Manufacturing Execution Systems) software information systems services, aiming to increase efficiency and quality in the supply chain with its expert team.

Company Profile

Introduction

By expanding our business area and integrating services including services in different sectors, we started to take place in the crypto money market as the Meschain project.

In addition to automation and software services in the real sector, Meschain aims to offer services that provide solutions to the needs in the crypto money market as a whole by connecting them. In this context, first of all, we will briefly talk about our services and then we will give information about our work plan in detail.

Business Review

MES Systems

The main service of Meschain is MES (manufacturing execution systems) services, which include software and automation solutions that will increase efficiency and quality in the supply chain, ensure traceability and transparency. In this context, with our MES services, in the supply chain;

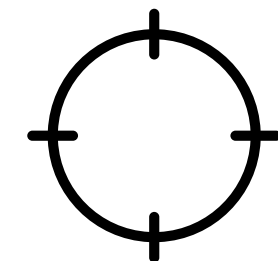

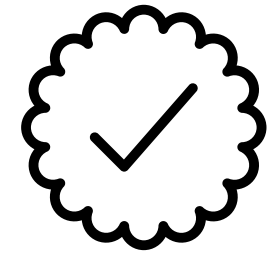

RF-ID Product Counting System

By accurately counting thousands of products in seconds, we reduce personnel costs and provide efficiency services that will ensure customer satisfaction with error-free counting.

Quality Control

We deliver only quality checked products, conduct testings along every stage of the production.

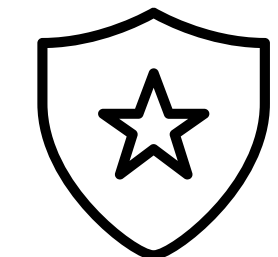

Personnel Tracking System

With this work, which will increase the motivation of the personnel and integrate the reward system according to success, we ensure transparency and provide an efficient and high quality working environment.

Data Safety

We store our data on the safest servers and assure our clients' privacy.

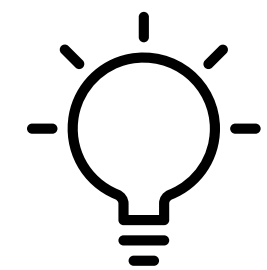

Product tracking system

We facilitate the provision of transparent information to customers by ensuring that the product is tracked from the raw material to the product stage.

Innovation

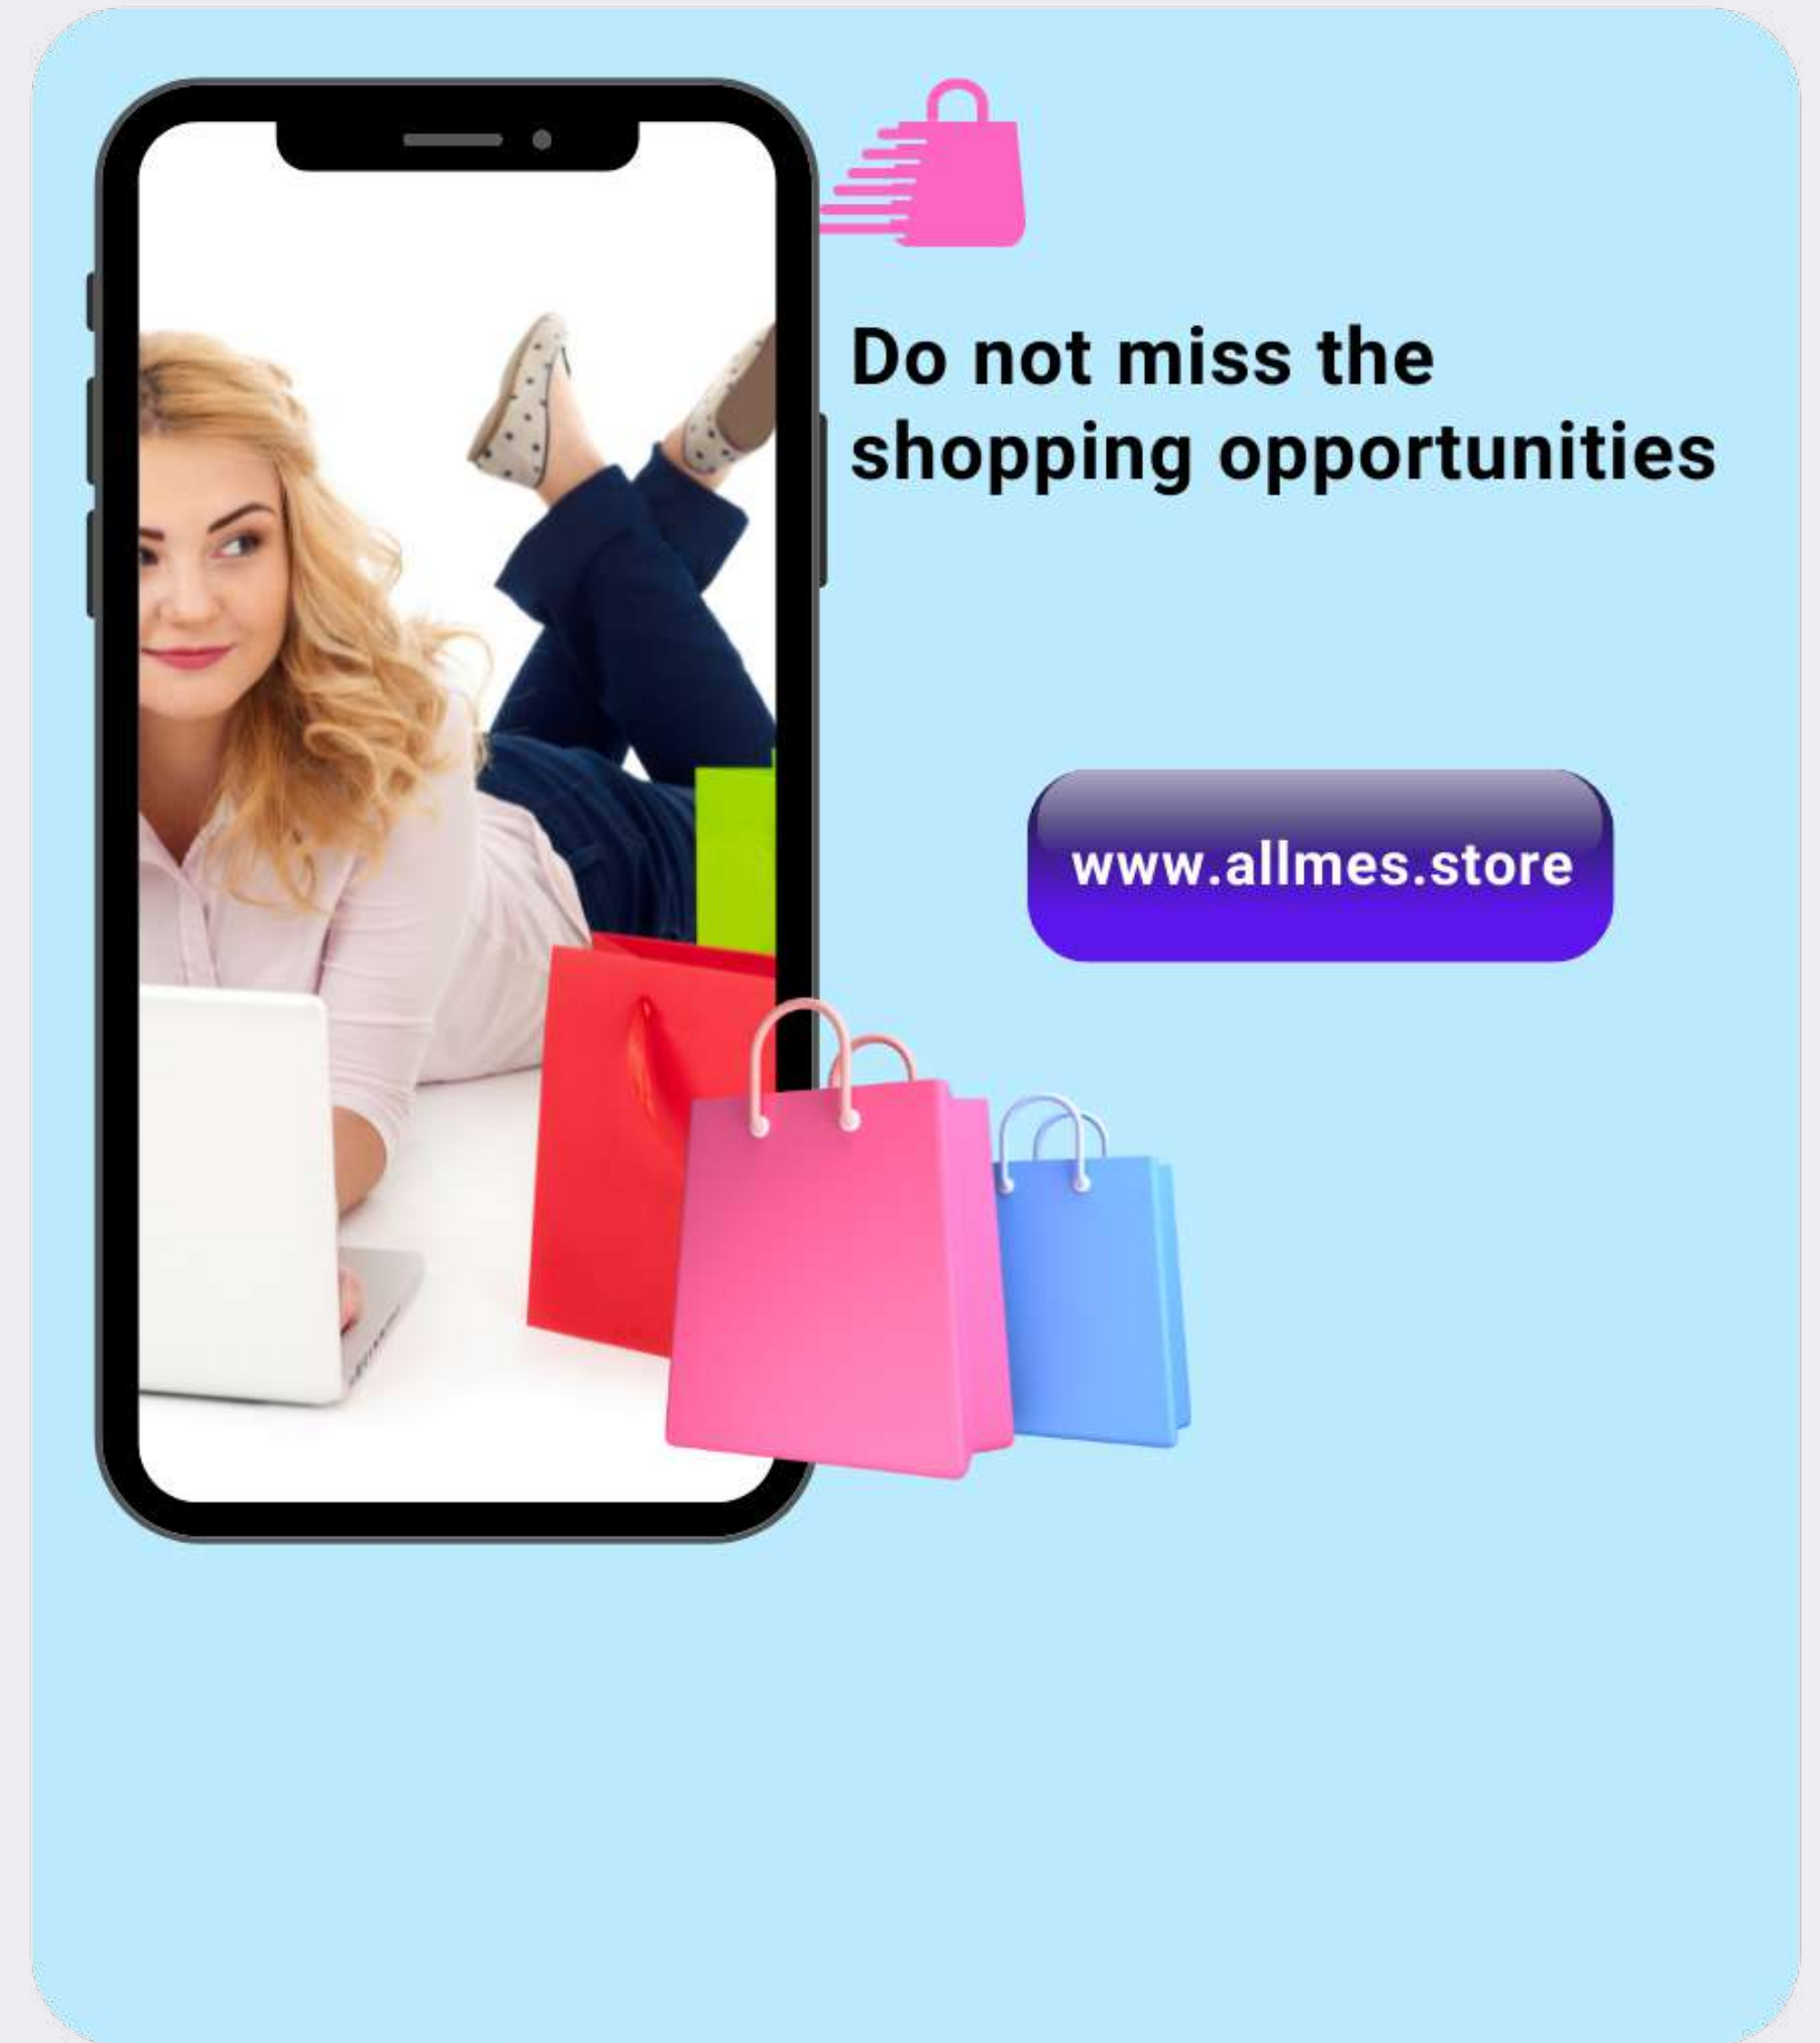

We enable companies to stand out with new ideas that frequently improve their products and increase our diversity

E-COMMERCE Platform

Meschain offers solutions to its customers, which it serves during the production phase, to be there after the production.

For this purpose. With the e-commerce platform that will bring suppliers together with customers, it continues its cooperation with its customers after production. Our local sales store, which we have created with www.allmes.store, will be able to serve the global after we make an agreement with Aliexpres. In this way, we aim to bring our customers together with thousands of users, especially in the crypto sector.

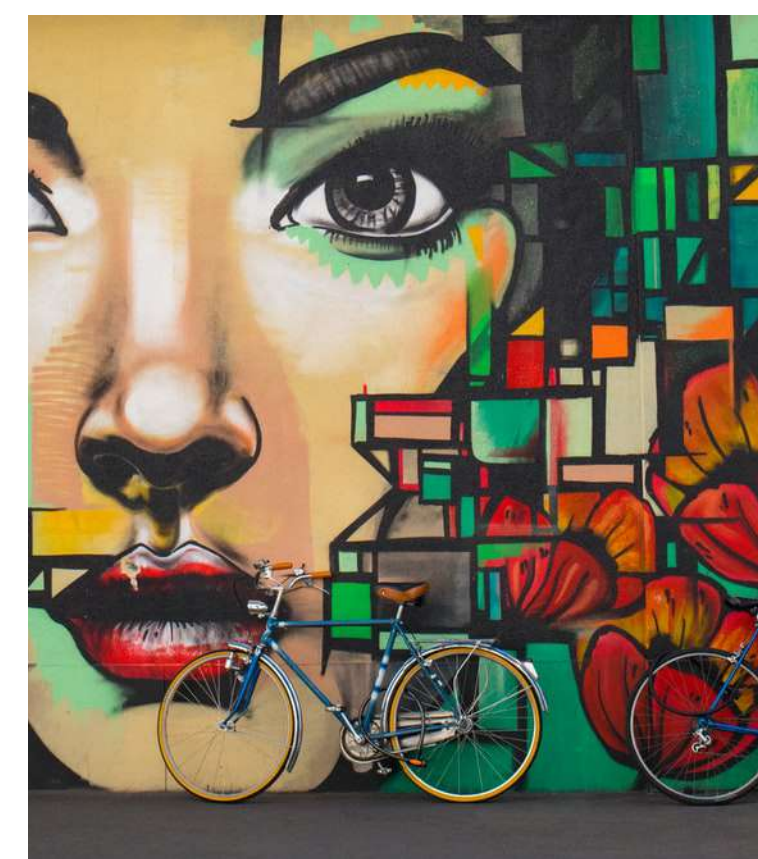

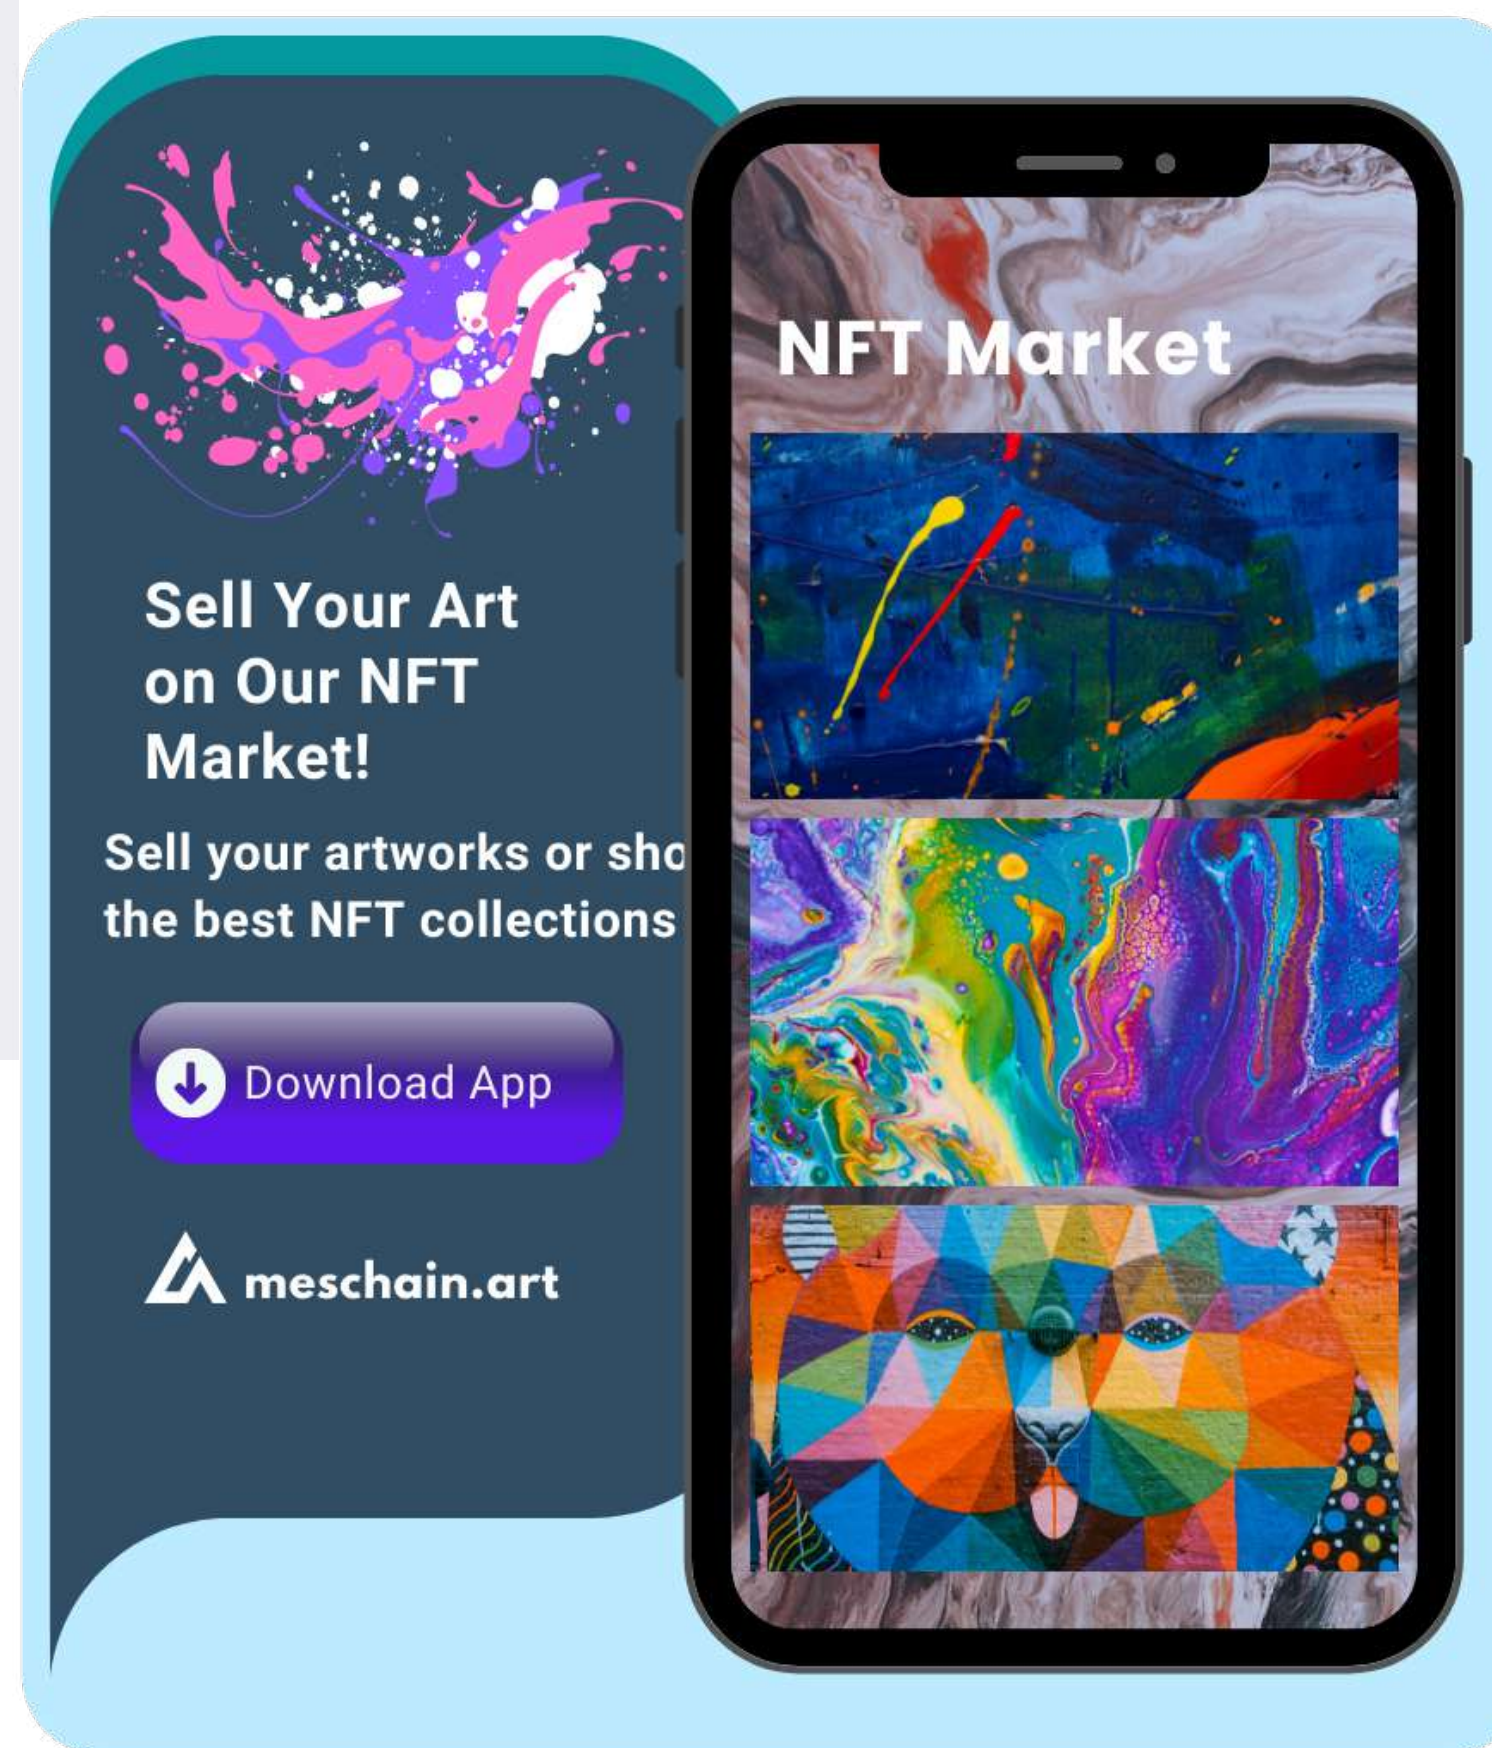

NFT MARKET

NFT, which is a revolutionary development of recent years, addresses not only the sales of works of art, but also many different areas such as brand registration, real estate sales, tickets that offer special advantages.

Digitize your product models with NFT

Meshain aims to digitize the works of the brands in the field of supply chain it serves in the field of blockchain with the NFT market. The transition of many brands to the blockchain can be done through our NFT market. In addition to its peers, Meschain continues to break new ground with this service.

FREELANCER PLATFORM

With the internet being an indispensable part of our lives, many businesses find solutions on the internet, especially after the pandemic. In order to reduce costs and work with alternative people, the service sector is trying to handle their work with freelancer employees with better quality and less cost. At the same time, with the progress of the crypto money industry, dozens of business areas have been created.

Work with trusted freelancers

Meschain took this opportunity and launched the permes.io freelancer platform to provide personnel support to its customers in the real sector and to provide accurate, fast and reliable solutions to the needs arising in crypto. For this purpose, thousands of users and employers will take place under the umbrella of permes. With this potential given by brain power, Meschain will solve many works with the most reliable freelancers within its own body.

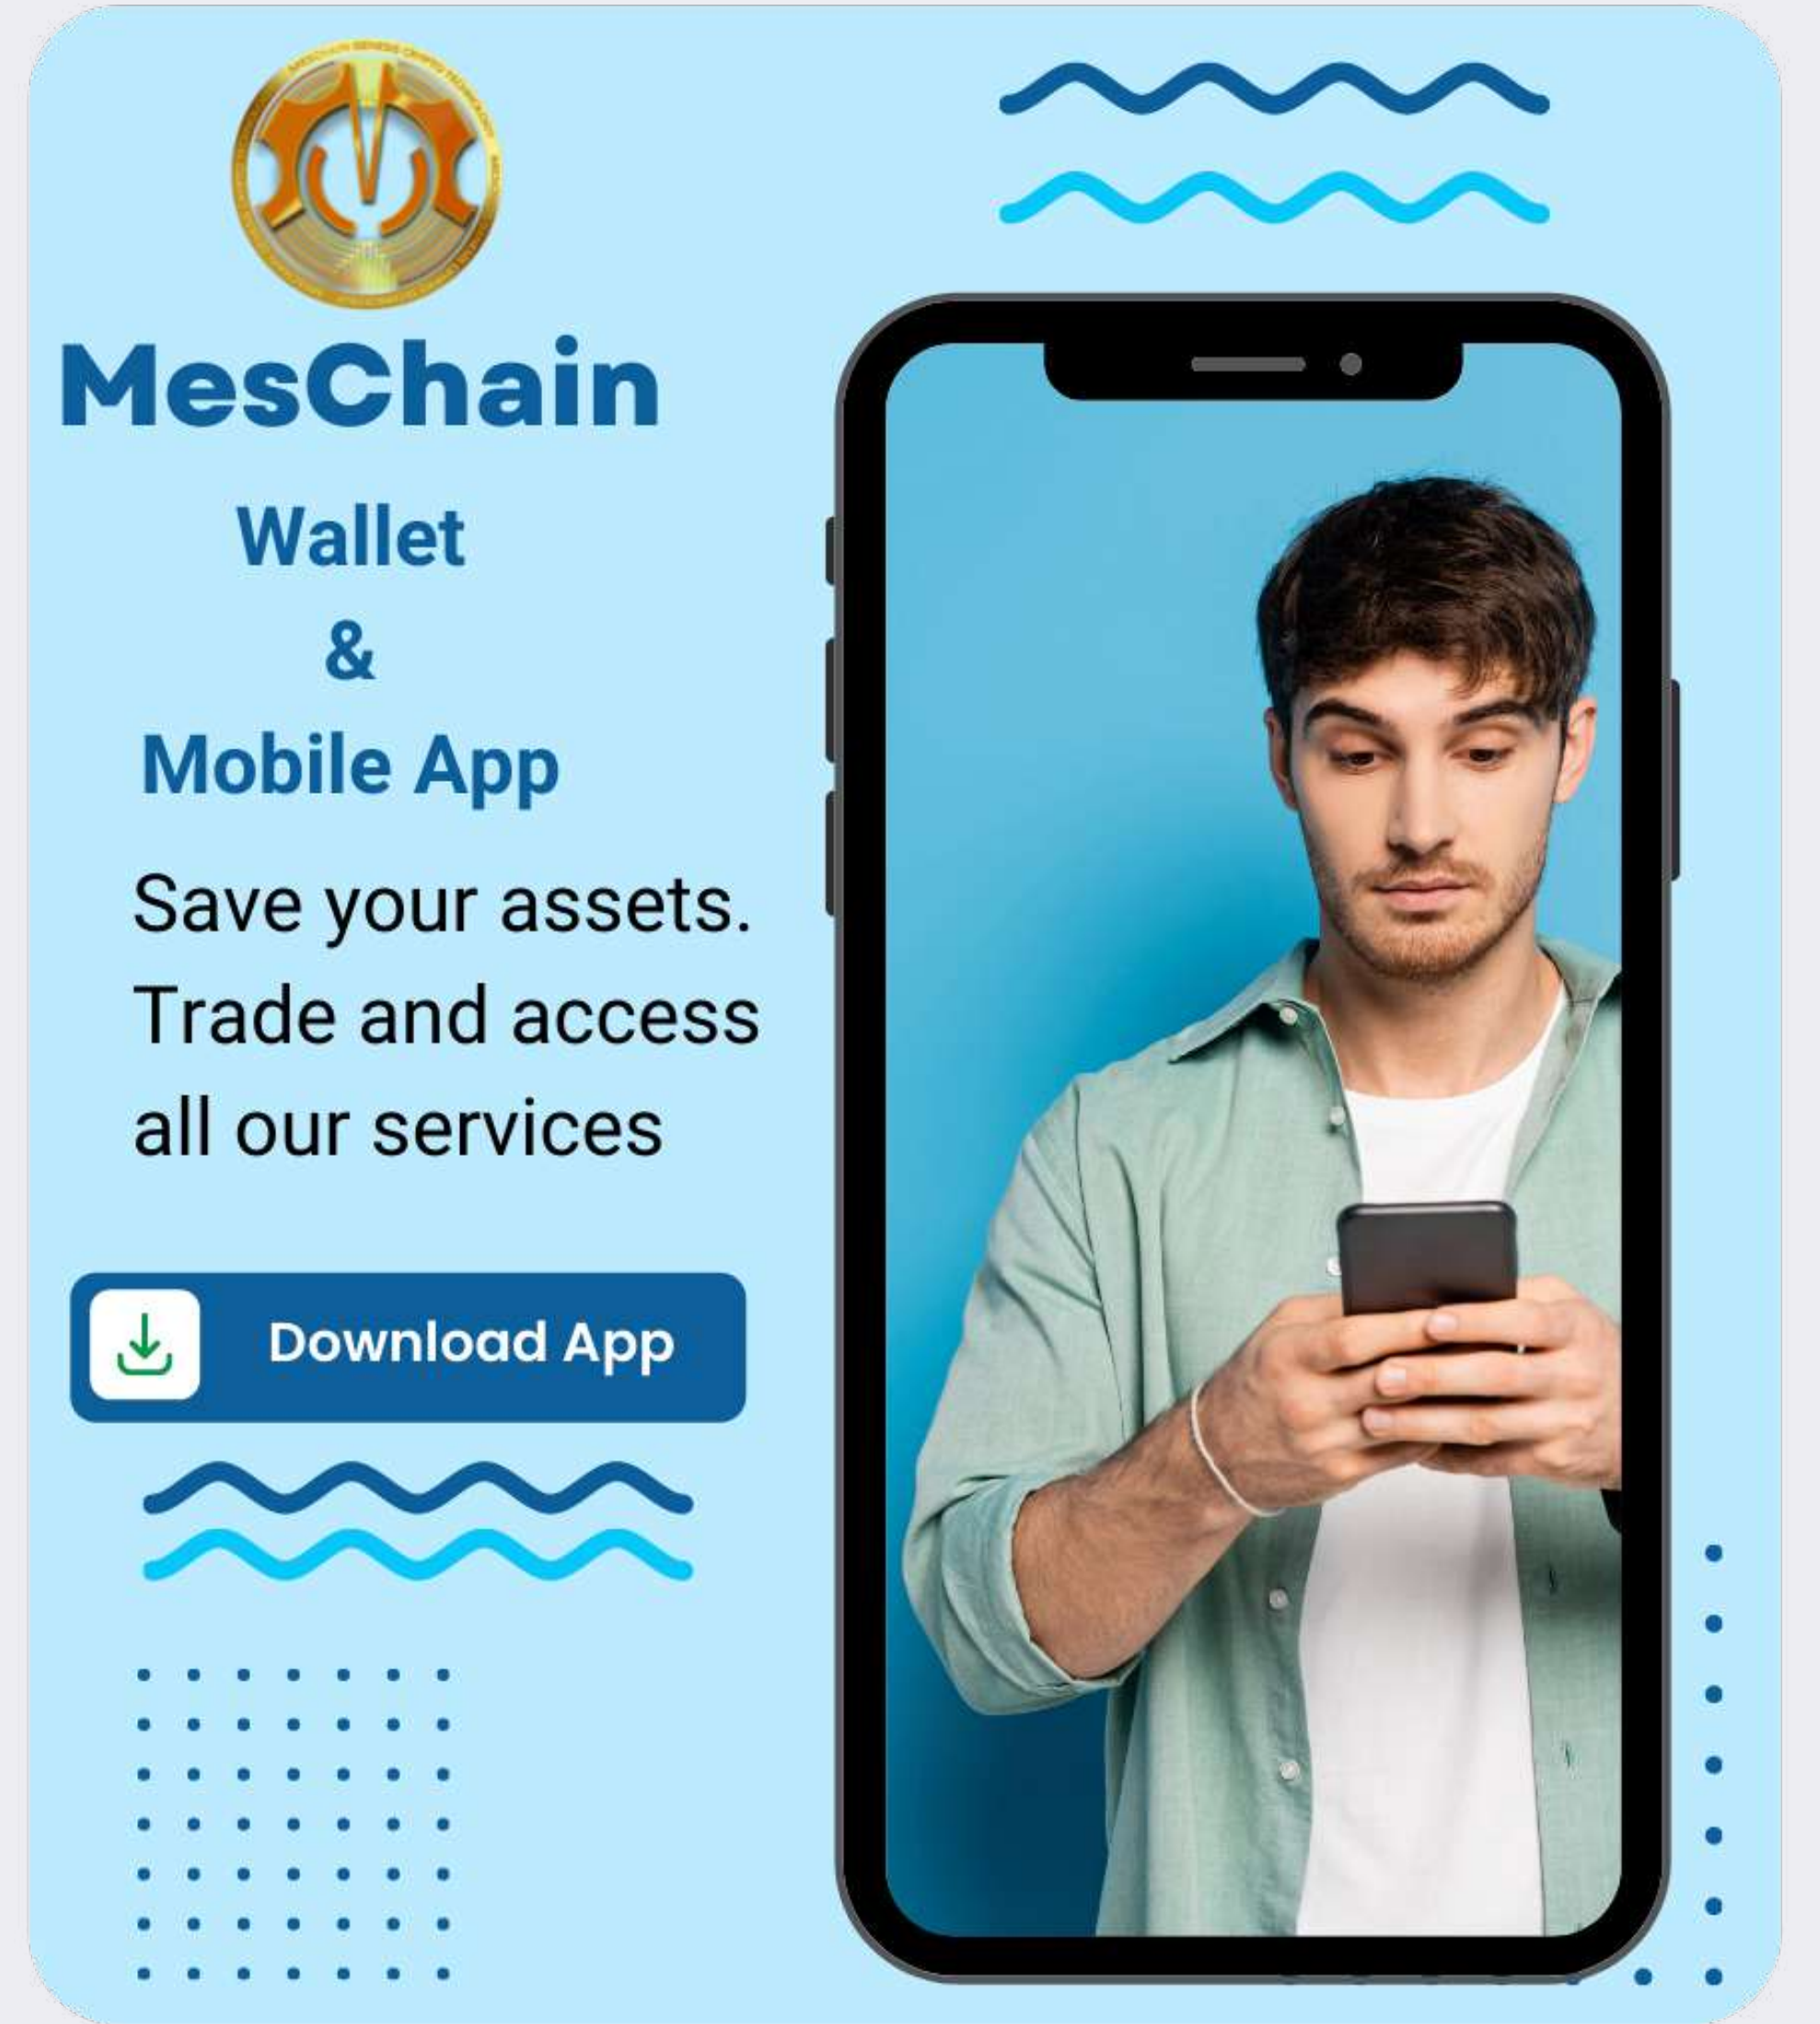

Wallet & Mobile app

More than the app at your fingertips

-With our Wallet and mobile application, which will facilitate access to all these services and provide practical payment opportunities, our users will be able to use all services with a single application. It will also securely store its assets in the Mes wallet to provide the opportunity to pay within the application. In the application content, they will be able to easily transact from decentralized services with the news portal, direct connection to exchanges and dapss service.

We will continue to develop services that will provide solutions between the real sector and the crypto sector by integrating the works that we consider useful and that provide solutions to the needs in the Meschain ecosystem, where we present all our works in a way that complements each other.

We created our Meschain staking

01 Stakeholders

We aim to reach unmatched earnings with the stakeholders plan.

03 Bluediamond

Budimaond earning plan has both high APY rate and special plan with MES reward

02 Crowdfunding

With the community-focused crowdfunding plan, we are breaking new ground with demographic investment and fair distribution. We provide our community with an early investment opportunity in quality projects.

04 Earn plan

50% of the profits of the crowdfunding will be distributed to the stakeholders on a pro rata basis at variable intervals.

Staking & Crowdfunding

Meschain, which is in the crypto money market as MES token, has started a sustainable staking and crowdfunding work that will provide passive earnings for MES holders and make investments profitable.

Staking

In order to keep the token economy safe to holders of Mes stake, we are planning to give tokens with high earning potential as a stake reward by investing in quality projects through the Capital companies we have agreed with instead of MES tokens. With this work, which will keep the Mes price strong, MES holders will have the opportunity to earn free tokens of projects that they could not have the opportunity to invest individually. With this work, MesChain has launched an extraordinary staking program.

Crowdfunding

Meschain has built a DAO-based platform for MES holders to also get the opportunity to invest extra. We are creating a strong structure in the Meschain ecosystem with the community-oriented crowdfunding work, where we will participate in quality projects from pre-sales, or we will partner and invest with high potential projects, and we will make this investment decision with the votes of the community.

Seize passive investment opportunity by staking MES token
